

Exports

ABS specializes in transferring and establishing the Boer goat breed in different regions of the world. Numerous countries have imported Terraweena Boer goat genetics in one form or another, including embryos and live animals to the US, embryos to India, semen to and live animals to Malaysia, live goats to China, live goats and embryos to New Zealand, live goats to Vietnam and live goats to the Philippines.

China has been a regular and preferred customer. ABS bred up to and over 1,000 kids per year to service these volume orders and purchased, over the years, the balance of animals from other Australian breeders to make up the numbers.

Geof Burnett-Smith is a regular figure overseas, welcomed by agriculturalists and goat breeders everywhere for his knowledge and ability to assist them in the successful establishment of the Boer goat in their regions. A world expert in the provision and transfer of genetics, interpretation of protocols, freight and quarantine difficulties and the general intricacies and pitfalls of the export market, Geof Burnett-Smith provides a consulting service which ensures a successful outcome. With years of experience in both hemispheres, ABS is able to provide premium genetics transferred through embryos or live animals, safe acclimatization of the progeny in the various regions and productivity of the offspring at the earliest possible stage.
